

The Dubina online platform invites you to participate in the "3D construct" contest. This is an opportunity to showcase your project to the world, earn money from selling your 3D constructor, and find partners and clients. Projects for any type of equipment, building, structure, equipment, or tool are accepted. The competition is ongoing, and there is no time limit for participation. Projects are published with the author's name. Projects must include a 3D assembly model, a description of the design and operating principles of the parts, and a set of tasks for assembling the model.

The contest consists of three stages:

Stage I – The Concept: Application submission.

Stage II – The Model: 3D model and parts list.

Stage III – Assembly: Description of components, task set, and final assembly of the entire project.

Projects that successfully pass all stages of the contest will be featured on the Dubina online platform.
